

# LIQUID SOLUTIONS

EXPERTS IN LIQUIDS PROCESSING FILTRATION AND BOTTLING

Product ref. FL – 02

Date: 14/7/11

## Enomatic / Enomaster vacuum bottle fillers

Compact, self-contained bench-top units. Bottles are placed under the nozzle and a special pump draws a vacuum, causing liquid to be sucked out of a feed tank and filled into the bottle to a pre-set level.

The units are suitable for still liquids, including wines and liqueurs, bottle-conditioned beer, sauces, oils and purees, toiletries and cleaning chemicals, of low and medium viscosity and are easily adaptable for most shapes and sizes of bottle and jar. Suitable only for GLASS or other rigid-walled bottles

Options available for small bottles ('mignons'), narrow necks ('kristal'), jars, puree, oil, large containers to 5 litre, hot filling, etc.

Example prices:
