## Semi-automatic Screw Capper LS-HD series

Heavy-Duty models with either push-button or hand-lever operation of descending head, to apply aluminium screw caps to glass bottles.

A rotating head with four sprung rollers cuts a thread into the cap and forms it onto the bottle, including the tamper-evident strip at the base.

Easily adjustable for different bottle heights and diameters. Capping heads have a limited range of adjustment for different cap sizes, or heads may be inter-changed to allow use of different bottle/cap combinations on one machine.

Suitable for non-carbonated products: spirits, liqueurs, oils, vinegars, toiletries, etc. Extra power motor available on the twin-button, 3-phase model, suitable for application of Wine or carbonated drink caps (Stelvin, BVS, etc.)

Single phase or three-phase supply  
Speed 400-600 bottles per hour.

Quality control: test the cap tightness: [CLICK HERE](#)
