Electric bench-top Cap Tightener

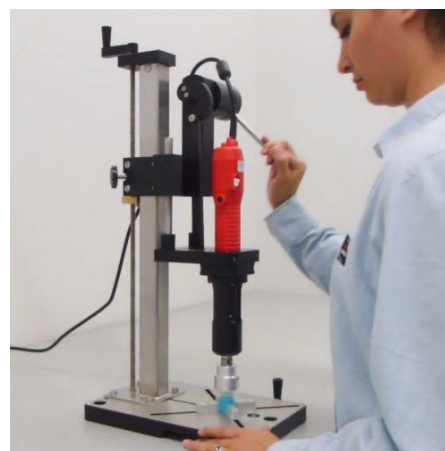

LESTT Bottle Cappers tighten screw caps from 15 to 70 mm. diameter. The torque output is easily adjusted by turning an external dial. Torque accuracy and repeatability are excellent. They run on a standard 220 – 250V / 50Hz supply. They are quiet and comfortable to use, and include features such as push to start and automatic shut off.

The operator positions a container, then a pull on the lever lowers the chuck onto the cap to be tightened. The machine starts and tightens the cap in a fraction of a second. When the cap reaches the pre set torque, the machine automatically shuts off automatically, signalling the operator to go to the next cap.

Minimum cycle time is 4 seconds, i.e. maximum speed 900 per hour.

OPTIONS include all-metal machined liner-less capping chucks, and a lever-operated gripper base, useful for small diameter, short, or , unstable bottles.
