Pneumatic bench-top Cap Tightener LSA model

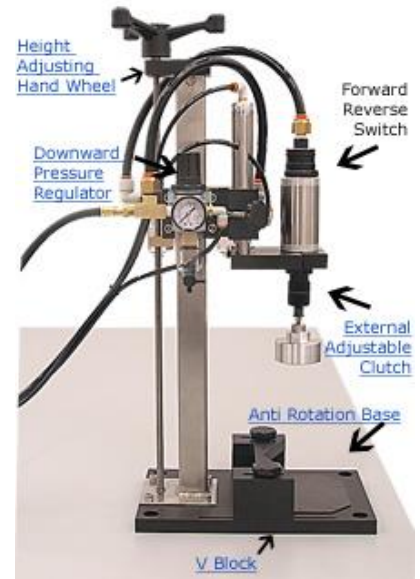

LSA Bottle Cappers tighten screw caps from 10 to 130 mm. diameter. The torque output is easily adjusted by turning an external dial. Torque accuracy and repeatability are excellent. They run on compressed air at 90 psi; they are very quiet and comfortable to use.

How it Works

Simply place the bottle to be capped into the V-block on the base of the machine and depress the foot pedal. This activates the machine to bring the capping motor down onto the cap, tighten the cap to the pre-set torque, then lift the capping motor back to its initial position ready for the next container.

Features an adjustable automatic-shut-off clutch: when the cap reaches the pre-set torque, the clutch signals the motor to shut off, and the machine lifts up off of the cap.

OPTIONS include liner-less capping chucks, higher powered models for large caps, modifications for sterile/ clean room environments

Example prices:

Basic LSA unit with one size capping chuck, four spare liners, air filter/regulator and anti-friction mat.

LSA-1 for 10 – 33mm caps	£1,695
LSA-2 for 18 – 130mm caps	£1,775
Additional capping chucks, example 25-33mm	£95

Prices exclude delivery, commissioning and VAT
