Pneumatic or Electric hand-held Cap Tightener LPS / LES model

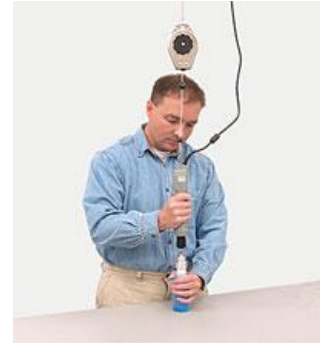

LPS / LES Bottle Cappers tighten screw caps from 10 to 130 mm. diameter. The torque output is easily adjusted by turning an external dial. Torque accuracy and repeatability are excellent. They run on compressed air at 90 psi or mains electricity; they are very quiet and comfortable to use.

The cappers are lightweight and include ergonomic features such as push to start and automatic shut off.

How It works

LPS/ LES capping machines are very easy to use. The operator lowers the chuck onto the cap to be tightened. With a gentle push down (push to start-there are no levers to depress) the machine starts and tightens the cap in a fraction of a second. When the cap reaches the pre set torque, the machine automatically shuts off automatically, signaling the operator to go to the next cap

OPTIONS include supports and stands, liner-less capping chucks, higher powered models with torque stabilising arms for

Example prices:

Basic unit with one size capping chuck, four spare liners, coiled air hose, sprung balancer and anti-friction mat.	Pneumatic £765 Electric £895
