Air Knife bottle driers

A powerful air blower supplies a precisely engineered device with air slot, positioned to remove moisture from the outer surface of bottles or other containers.

Essential in situations where there are condensation / drips on the surface, or after a container has been through an external rinse.

Facilitates labelling / ink-jet printing, and results in a dry product going into the outer package.

Equipment and configurations are available to suit virtually any situation including under-cap drying, and options include additional adjustable nozzle assemblies, acoustic enclosures, HEPA air filters, stainless ducting.

Example prices:

Blower unit 5.5KW £1,085

**Typical setup: ducting/connectors/
splitter/hose/clips** £270

Typical setup: clamps/brackets £200

Air knives (pair):
650mm (e.g for whole bottle) £1,430
320mm. (e.g for bottle neck) £915
